UQ25CA741A_Capstone Project Phase-1

Presentation-2 Guidelines

Phase-1 Second Presentation

Presentation Dates: **25th, 28th & 29th September 2026 tentatively**

Deliverables for Presentation-2

A. Project Implementation Demo – Minimum 50%

- Students must demonstrate **at least 50% of the project functionalities implemented**.
- The implemented modules/features should be functional and demonstrable.
- Students must clearly explain the **methodology used for implementation**.
- The project flow should be explained using appropriate **pseudocode**, wherever applicable.
- **Note:** Login functionality will be considered as only **5% of the project implementation**. Therefore, students are expected to demonstrate substantial project-specific functionality beyond the login module.

B. Presentation PPT slides must include:

1. **Project Title**
    - Project title
    - Guide details
    - Student details
2. **Abstract**
3. **Introduction**
    - Problem Scenario
    - Proposed Solution
    - Purpose
    - Scope
4. **Detailed Literature Survey**
    - Minimum **10 research papers** from **IEEE or Scopus-indexed journals/conferences and** include Summary of surveyed research papers with its title, author(s), published year with publication details and a brief summary for each of the paper.
    - Papers should preferably be from the **last five years**

- The literature survey should include:
  - **Background Study:** Existing systems/applications related to the proposed project.
  - **Comparative Study:** Comparison of features/functionality of existing applications with the proposed application in **tabular format**

5. **Tools & Technologies Used**
6. **Functional Requirements – In Detail**
   - Users of the system
   - List of functional requirements
   - Description of each functional requirement
7. **Non-Functional Requirements**
   - Project-specific non-functional requirements
8. **Design – High-Level Diagrams**
   - Architecture Diagram
   - Process Flow with Design Methodology – for ML projects
   - Process Flow/Block Diagram – for Network/IoT projects
   - Database Design:
     - ER Diagram
     - Conceptual Schema for MySQL/relational databases
     - Document Structure for unstructured databases
9. **References**
   - Books
   - Research Papers
   - Websites
   - References must be provided in **IEEE format**
10. **Implementation**

- Minimum **50% project implementation**
- **Login functionality will be considered as only 5%**
- Students must demonstrate meaningful project-specific functionalities.
