UQ25CA741A_Capstone Project Phase-1

Presentation-3 Guidelines

Phase-1 Third Presentation

Presentation Dates: **2nd Nov to 6th November 2026 tentatively**

Deliverables for Presentation-3

Presentation 3 is expected to demonstrate substantial progress toward completion of the project. Students must achieve a minimum of 80% implementation, with the maximum expected implementation being 100%.

Flow and Deliverables for Presentation 3

1. **Project Title**
    - Project title
    - Guide details
    - Student details
2. **Abstract**
3. **Introduction**
    - Problem Scenario
    - Proposed Solution
    - Purpose
    - Scope
4. **Detailed Literature Survey**
    - The literature survey should be updated based on the latest work carried out. Minimum **10 research papers** from **IEEE or Scopus-indexed journals/conferences and** include Summary of surveyed research papers with its title, author(s), published year with publication details and a brief summary for each of the paper.

(i) Background Study

- Detailed study of existing systems/applications and relevant research.

(ii) Comparative Study / Research Related Work

- For Web/Mobile Application Projects: Comparative study of existing applications.
- For other projects: Research-related work and comparison with existing research approaches.

5. **Tools & Technologies Used**
    - Programming languages
    - Frameworks
    - Libraries
    - Databases
    - Development tools
    - Other relevant technologies
6. **Functional Requirements – In Detail**
    - Users of the system
    - Complete list of functionalities
    - Detailed description of each functionality
7. **Non-Functional Requirements**
    - Project-specific non-functional requirements such as performance, security, scalability, usability, reliability, etc.
8. **Design – High-Level Diagrams**

Include appropriate diagrams based on the project:

- Architecture Diagram
- Process Flow with Design Methodology – for ML projects
- Process Flow/Block Diagram – for Network/IoT projects
- Database Design
    - ER Diagram
    - Conceptual Schema for MySQL/relational databases
    - Document Structure for unstructured databases

9. **Implementation – Minimum 80%**

Students must demonstrate at least 80% of the project implementation, with 100% implementation being the maximum expected level.

The presentation must include:

- Pseudocode of implemented modules
- Implementation screenshots
- Demonstration of implemented functionalities
- Explanation of the project workflow
- Evidence of the actual working implementation

10. **Software Testing**

For ML Projects:

- Model testing
- Test 2–3 models, wherever applicable

- Evaluate the models using all relevant evaluation metrics
- Compare the performance of the models
- User Interface testing, if applicable

For Web/Mobile Application Projects:

- Prepare and execute test cases for all implemented functionalities
- Record the test cases and results
- Include positive and negative test cases wherever applicable

For Other Projects:

- Prepare appropriate test cases based on the project's functionality and objectives
- Document the test results and observations

11. References

- Books
- Research Papers
- Websites
- Complete bibliographic information must be provided in IEEE format
